KSU Campus Network Access from a Mac

The following describes how to use the GlobalProtect agent to connect remotely to the campus network using a VPN connection. For information on installing the GlobalProtect Agent to utilize a VPN connection, please refer to our VPN Client Installation for Mac documentation.

**Note:** This guide was written using Google Chrome version 64.0.3282.119.

### Establishing the VPN connection on the Off-Campus Mac

1. Connect to the GlobalProtect VPN service by clicking the GlobalProtect icon, located on the menu bar.

![Figure 1 - GlobalProtect](image1.png)

2. Click **Connect**.

![Figure 2 - Click Connect](image2.png)

3. The **Portal** field will populate with the VPN address entered during client setup. Enter your login credentials (e.g., **NetID** and **password**) (See Figure 3).

4. Click **Connect** (See Figure 3).

![Figure 3 - Enter Login Credentials](image3.png)

5. When successfully connected, the **Status** indicator will change to **Connected**. You are now connected to the KSU campus network through the GlobalProtect VPN client.
Accessing Campus Services

Rather than connecting to your office computer, you may wish to use your browser to access commonly used KSU applications and services that can only be accessed while on the KSU network. The KSU VPN serves as an entry point. The following instructions describe how to access the Campus Intranet page.

To access the KSU Campus Intranet site, use the following steps:

**Note:** The Remote Desktop Connection is not needed to access the campus intranet as long as you are connected to the KSU VPN.

1. After connecting to the KSU VPN, open your preferred browser (i.e., Mozilla Firefox or Google Chrome).
2. Navigate to [https://campus.kennesaw.edu/](https://campus.kennesaw.edu/).
3. The Campus Intranet website will open. Click on the link of your choice to access the desired service.

Disconnecting the Remote and VPN Connections

1. To disconnect from the network, click the **GlobalProtect icon** in the menu bar.

![Figure 5 - GlobalProtect in Taskbar](image)

2. Click **Disconnect**.
