KSU VPN Client Installation & Campus Network Connection with Android Devices

The following describes how to install and use the GlobalProtect agent to connect remotely to the campus network using a VPN connection on an Android device.

Note: This documentation was created using a Samsung Galaxy Tab S (Android version 6.0.1_0021).

Installing the GlobalProtect Agent on Your Android Device

1. Open the Google Play Store on your device.

2. Search for Global Protect.
3. Under the application name, tap **Install**.

**Figure 4 - GlobalProtect Needs Access Message**

5. Once installed, tap **Open**.

![Open GlobalProtect](image)

**Figure 5 - Open GlobalProtect**
6. In the Portal field, enter **vpn.kennesaw.edu** (See Figure 6).
7. In the Username field, enter your **NetID** (See Figure 6).
8. In the Password field, enter your **NetID password**. (See Figure 6).
9. Tap **Connect** (See Figure 6).

Accessing Campus Services
Rather than connecting to your office computer, you may wish to use your browser to access commonly used KSU applications and services that can only be accessed while on the KSU network. The KSU VPN serves as an entry point. To access the KSU Campus Intranet site, use the following steps:

Note: The Remote Desktop Connection is not needed to access the campus intranet as long as you are connected to the KSU VPN.

1. After connecting to the KSU VPN, open your preferred browser (i.e., Mozilla Firefox or Google Chrome).
2. Navigate to https://campus.kennesaw.edu/.
3. The Campus Intranet website will open. Click on the link of your choice to access the desired service.
